The text of those sections of Title 35, U.S. Code not included in this action can be found in a prior Office action.

Claims 12, 14, 15 are rejected under 35 U.S.C. 103(a) as being unpatentable over Chatta et al. 5922295.

Chatta teaches in column 2, 4 and ex. 1 a carrier which can be cordierite (component 1), coated by alumina (component 2b). The alumina is impregnated with a catalyst (component 2c) and a compound containing P and W (component 3). The reference differs in that it does not contemplate using alkali metal, but teaches this as an option. Using the promoter metal- while acknowledging the detriments thereof- is an obvious expedient as a tradeoff between performance and expense. Further, when the feedstream does not contain S, it is an obvious expedient to use alkali metal because there will be enhancement without the poisoning.

Applicant's arguments with respect to claims above have been considered but are moot in view of the new ground(s) of rejection.
